DO NOT CIRCULATE

1. The light beacon at Mys Khersonneskiy (4435N,3323E), is situated on top of a cylindrical tower which is constructed of masonry and whitewashed so that it is quite prominent. This tower is also used as a signal station.
2. There were about four or six radio antennae nearby, two of which were probably used as radio beams.
3. Behind the light beacon and the radio antennae, on an embankment some 30 to 50 meters above sea level, there was an airfield. Its runways (or possibly only one runway) were orientated in the direction of Mys Feolent (4430N-3329E). Source observed radar and D/F apparatus on the field but could not give the exact number. Source also believed that this airfield was used exclusively for fighters of the jet and propellor type. About 50 of them were observed lined up on the field.
4. On the stretch of coast in front of the airfield, there were about 15 or 20 markers. Each marker was a rectangular white surface with a black streak through the center, the streak being vertical to the long side.
